## The Historical Context

Before the rise of right-wing media, the portrayal of fathers in American popular culture was largely positive. Fathers were often depicted as strong, loving, and supportive figures. However, the rise of right-wing media in the 1970s and 1980s led to a shift in this portrayal. Fathers were increasingly portrayed as weak, absent, or even dangerous. This shift was driven by a number of factors, including the rise of the religious right, the backlash against the feminist movement, and the increasing economic insecurity faced by many American families.

### **The Impact on Fatherhood**

The negative portrayal of fathers in right-wing media has had a number of negative consequences for fatherhood. First, it has contributed to a decline in the number of fathers who are actively involved in their children's lives. Second, it has reinforced traditional gender roles and made it more difficult for fathers to be seen as equal partners in parenting. Third, it has contributed to a growing sense of isolation and alienation among fathers.

### **The Impact on the Gender Gap**

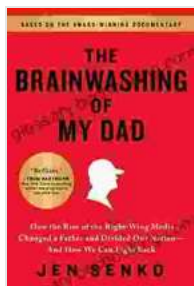

The negative portrayal of fathers in right-wing media has also contributed to a widening of the gender gap in parenting. In recent decades, women have made significant gains in the workforce and in education. However, fathers have not kept pace with this progress. As a result, women are now more likely to be the primary caregivers for their children. This shift has a number of negative consequences, including increased stress for women, reduced earnings for women, and a decline in the quality of parenting for children.
