- Identify common hazards in the workplace
- Assess the risks associated with hazards
- Take steps to avoid hazards

- Report hazards to your supervisor

What Do You See? Hazard Awareness is a must-read for anyone who wants to work safely and avoid accidents. Free Download your copy today!

Why is hazard awareness important?

Hazard awareness is important because it helps you to identify and avoid hazards that could cause accidents. Accidents can happen anywhere, at any time. But by being aware of the hazards around you, you can take steps to avoid them and protect yourself and others.

There are many different types of hazards in the workplace. Some hazards are obvious, like slippery floors or unguarded machinery. Other hazards are less obvious, like chemical spills or electrical hazards. It's important to be aware of all types of hazards, so that you can take steps to avoid them.

What are some common hazards in the workplace?

Some common hazards in the workplace include:

- Slippery floors
- Unguarded machinery
- Chemical spills
- Electrical hazards
- Falling objects
- Fire hazards
- Explosions

These are just a few of the many different types of hazards that you could encounter in the workplace. It's important to be aware of all types of hazards, so that you can take steps to avoid them.

How can I identify hazards in the workplace?

There are many different ways to identify hazards in the workplace. Some of the most common methods include:

- Visual inspection
- Job hazard analysis
- Safety audits

Visual inspection is the simplest way to identify hazards in the workplace. Simply walk around your work area and look for any potential hazards. Job hazard analysis is a more formal process that involves identifying the hazards associated with each task or job. Safety audits are conducted by safety professionals to identify hazards and develop recommendations for corrective action.

What should I do if I identify a hazard?

If you identify a hazard in the workplace, you should take the following steps:

- Assess the risk associated with the hazard
- Take steps to avoid the hazard
- Report the hazard to your supervisor

Assessing the risk associated with a hazard involves considering the likelihood that the hazard will cause an accident and the severity of the potential accident. Once you have assessed the risk, you can take steps to avoid the hazard. This may involve using personal protective equipment, changing your work procedures, or reporting the hazard to your supervisor.

It is important to report all hazards to your supervisor. This will help to ensure that the hazard is properly addressed and that steps are taken to prevent an accident.

What are some tips for improving my hazard awareness?

There are many things you can do to improve your hazard awareness. Some tips include:

- Be aware of your surroundings
- Pay attention to warning signs and labels
- Use personal protective equipment
- Follow safe work procedures
- Report hazards to your supervisor

By following these tips, you can improve your hazard awareness and help to prevent accidents in the workplace.

The infographic is divided into several sections. On the left, a yellow diamond-shaped sign reads 'HAZARD CONTROL' with the text 'Workplace procedures adopted to minimize injury, reduce adverse health effects, and control damage to plants or equipment.' Below this, it says 'Controls usually most effective (or least effective)'. The central part features a 'Hierarchy of Controls' diagram as an inverted pyramid with five levels: ELIMINATION, SUBSTITUTION, ISOLATION, ADMINISTRATIVE, and PPE. To the right of the pyramid are five categories of controls with icons and brief descriptions: 1. Elimination (crossed-out circle), 2. Substitution (circular arrow), 3. Engineering Controls (gear), 4. Administrative Controls (calendar), and 5. Personal Protective Equipment (hard hat). Below the pyramid, a vertical scale shows 'Safe' at the top and 'Unsafe' at the bottom, with a magnifying glass icon. The bottom left section, 'Steps in hazard control program', lists: 1. Identify the hazard, 2. Assess the hazard, 3. Control the hazard, 4. Monitor and review the control program, and 5. Communicate the hazard information. The bottom right corner features the logo for 'CCOHS.ca'.
